

DOUBLE WALL STORAGE TANKS

POLYETHYLENE TANKS

Double Wall Storage Tanks allow you to address all your environmental and safety concerns. All sizes are available in open top outer containment configuration and with a domed or welded top inner tank. Check with Chemical Containment Systems for details. All dimensions and measurements are approximate. We recommend the use of top entering fittings to avoid penetrating the containment wall. All tanks meet or exceed regulations for containment of hazardous materials. Materials of construction are from linear or cross linked polyethylene. An optional leak detection system in the interstitial space gives you the assurance of environmental compliance.
